Exchange 2010 : Configure Anti-Spam RBL

Chris Booth - 2017-08-30 - Exchange Server

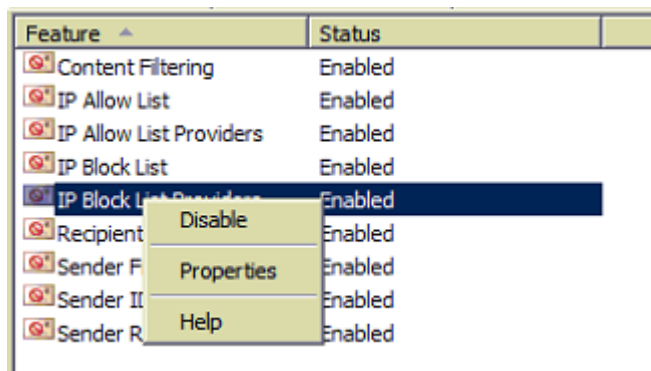

Configuring Anti-Spam RBL on Exchange 2010

If you use Google DNS as your DNS forwarders, RBLs don't work as Google returns "NXDOMAIN" rather than an RBL result.

- 1) Load the Exchange Management Console (EMC) and navigate to Organization Configuration > Hub Transport, then the Anti-Spam tab

- 2) Right click "IP Block List Provider" and choose Properties

- 3) Add the RBL you wish to use eg zen.spamhaus.org

Edit IP Block List Provider [X]

Provider name:
SpamHaus

Lookup domain:
zen.spamhaus.org

Return status codes: _____

Match any return code
 Match specific mask and responses:

Match to the following mask:

Match any of the following responses:

+ Add Edit X

Determine the error message returned when a sender is blocked by a provider: Error Messages...

OK Cancel

4) Add multiple RBLs for extra filtering if required
